

6 stage Heavy Duty Countertop RO models.

Which model is mine?

Just check for SKU # of filter located above RO stage.

If cartridge SKU is K5654BB (as on picture), your model is 2014-2016

If cartridge SKU is CL10ROT28B , your model is 2017

What is difference? The difference is stage consequences.

2014-2016 Model:

1st Stage: Sediment

2nd Stage: Carbon CL10ROT28

3rd Stage: Softener K5654BB

4th Stage: Membrane Stage

5th Stage: Carbon/KDF-55 K2567-BB
(replaced old DI/KDF55/Carbon)

6th Stage: Alkaline (different models)

Model of 2017:

Sediment

Carbon CL10ROT28

Membrane Stage

Softener K5654BB

Carbon/KDF-55 K2567-BB

Alkaline 4in1, SKU ROR-A4

Model of 2014-2016 has softener as third stage which extend life of RO membrane and remove hard minerals. Model of 2017 has softener located after membrane stage which slightly shorten membrane life, but provide extended life for softener itself. We suggest to use the same configuration as your RO stage has originally. If you want to replace filter cartridges and change filter cartridges sequences, **you will need to get new set of elbows and straight QC fitting.**
